

Drill Team Performance Requirements

In order for the Drill Team to provide a quality performance with the highest amount of safety for both riders and observers, the requesting organization will have to provide a paved (asphalt) or concrete (rough surface) area 300' x 60' (300 feet x 60 feet) without any obstacles such as manhole covers, metal grates or drains, potholes, parked vehicles or islands. This area should also be as level as possible; under no circumstances can the team perform on gravel, grass, dirt or sand areas. Anything outside of these guidelines, including dimensions and slope of field, must be inspected prior to the performance and accepted/approved by a Drill Team Officer.
